

FirstPass

AI contract triage for in-house legal teams

Every contract gets an AI first pass. A human confirms.

The queue gets shorter every month.

Abdelrhman Rayis · PortSwigger AI Pioneer · July 2026

GREEN auto-clear

on-prem · local AI · no cloud

The Code

A working, measurable prototype that reads commercial contracts (NDAs, order forms), checks them against a living playbook of standard positions, and routes each one as GREEN, AMBER or RED. Built to run entirely on your own servers.

7-step agentic loop

Mutual Non-Disclosure Agreement

confidence 90% engine discrepancy

<30 min manual = <30 min (27 saved)

Parties: Inteltech LLC / PortSwigger Ltd

Term: perpetuity

3 FINDINGS

DEVIATION

medium

known pattern

Perpetual / indefinite confidentiality term

"... ty obligations of the parties shall continue in perpetuity and shall not expire, notwithstanding terin"

Perpetual obligations are an unmanageable long-tail liability. Three years is our standard.

SUGGESTED REDLINE: previously used

Replace the perpetual obligation with a fixed term of three (3) years from the date of disclosure, save for trade secrets which remain protected for as long as they qualify as such under applicable law.

Accept Edit Reject

DEVIATION

medium

known pattern

Non-England & Wales governing law

"... construed in accordance with the Laws of the State of California, and the parties submit to the jurisdiction"

Deferring under an unfamiliar foreign law raises cost and uncertainty for a low-value NDA.

SUGGESTED REDLINE: previously used

Amend governing law and exclusive jurisdiction to the laws of England and Wales. Where the counterparty insists on their home jurisdiction, fall back to a neutral forum and escalate to legal.

Accept Edit Reject

WARNING

low

known pattern

Missing: Return or destruction of information

No return / destruction obligation on termination.

Demo Video

A walkthrough of FirstPass running live: the CLI queue in under 30 seconds, the web console a lawyer would open each morning, and the learning flywheel closing the one recall gap the eval found.

► FirstPass demo

Watch the prototype triage 10 contracts, the web console at work, and the learning loop in action — all running offline on a local machine. No cloud, no API keys, no contract text leaving the building.

[Watch on GitHub >](#)

Quickstart (30 seconds)

```
python3 -m venv .venv && source .venv/bin/activate
pip install -r requirements.txt
python run.py --all
python webapp/app.py    # http://localhost:5050
```

Presentation Deck

18 slides that walk through the thinking, not just the feature list. From first principles and five whys through the agentic loop, measured results, privacy architecture, and how I would add value at PortSwigger.
